

American Z gauge

 Over 25 years ago Märklin introduced Z Gauge, the smallest fully operational electric railway (1:220), to the model railroading world. Through the years Märklin has produced hundreds of locomotives and rolling stock in both American and European prototypes. Even though many of these prototypes are readily available, they cannot all be listed in the current Märklin catalog. Shown here are several Märklin Z American prototypes that are still available, but are not included in the full line catalog.

Many of these items are distributed exclusively in North America and are available through your authorized Märklin dealer. So visit your Märklin dealer today and start combining these American locomotives and rail cars with the other trains and accessories featured in the current Märklin catalog and create your own American layout.

All trains shown as actual size.

8861 Southern Pacific Locomotive

48669 Union Pacific Boxcar

8214 Tank Car Set

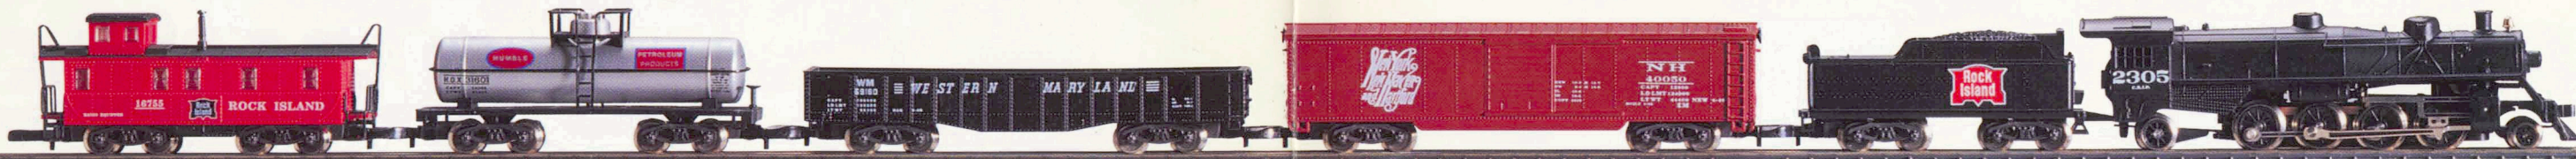

82823A Oil Tank Car Set

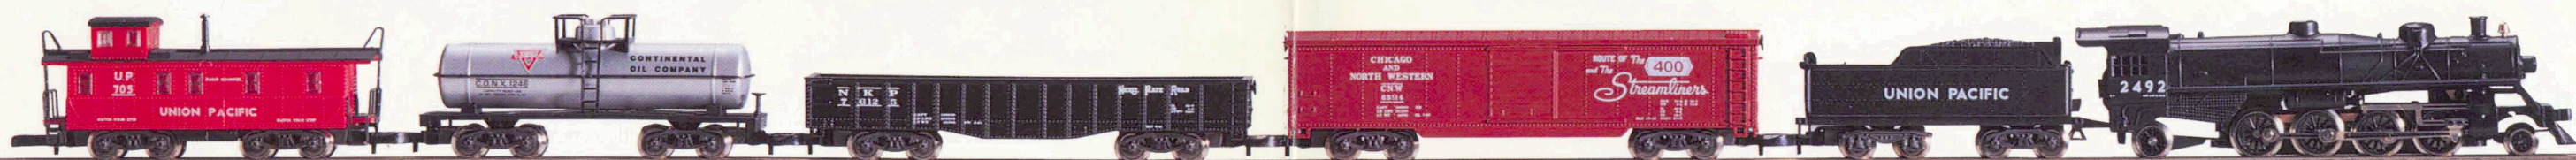

(The Oil Tank Car Set is not an American prototype, however the cars are lettered for brands that are widely recognized throughout North America. This limited edition set was a collaborative project with the Märklin subsidiary in France.)

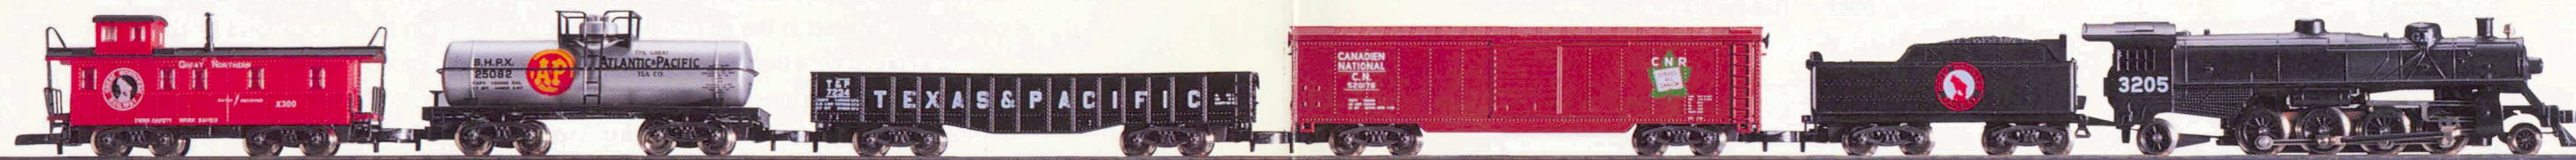

88711 ICE Amtrak Train Set

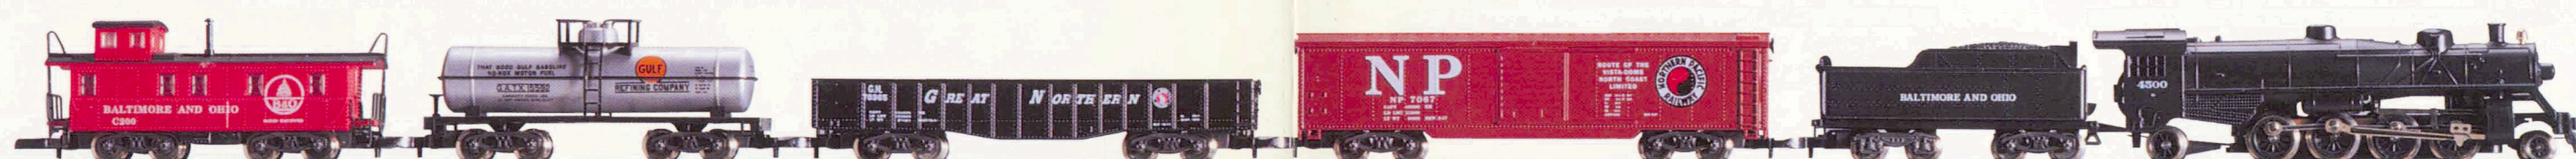

8004B Rock Island Regional Train Set (The trademark "Humble" is owned by Exxon Corporation and is used under license.)

8005A Union Pacific Regional Train Set
